The USA hCG Reference Service is a specialized consulting service that aids physicians in cases with persistent low levels of hCG, the diagnoses of trophoblast disease, testicular cancer and other conditions presenting with abnormal levels of hCG. The hCG test, or pregnancy test, is one of the most common immunoassays run in clinical laboratories today. It is assumed that an hCG assay detects only hCG or hCG β . This is not the case. hCG kits can detect a wide and varying range of different hCG-related molecules in serum or urine samples
