For more than a quarter of a century, Innovative Research of America has assumed the leadership role in improved time release technology. The main mission is to standardize the technology of drug delivery. Our proven Time Release Hormone and Drug Pellets help investigators take charge of product delivery and expand their abilities to do meaningful and reproducible research.

Since it is not easy to administer drugs and hormones orally to research animals, several delivery methods have been devised as alternatives. However, most scientists continue to labor with unreliable injectables to conduct their research.

Because of this inadequacy, biomedical research is as confusing as it is challenging and as frustrating as it is creative. The options of scientists to address scientific questions are not only dependent, but are also limited by the process of active product delivery. Traditionally, product delivery into the experimental animal has been the procedure most subject to variables and the most difficult to standardize effectively. The very process of having to accurately administer drugs to experimental animals can become a logistic nightmare for scientists
