We aim to develop novel technologies to provide safer and more effective options to patients in areas with substantial unmet medical needs, particularly in the areas of biosurgical and passive immunotherapy products. We are utilizing our proprietary protein purification technology, innovative development capabilities, and manufacturing know-how to develop these product lines, often through collaborations with companies whose marketing and sales expertise are a complement to our own areas of specialty. Our biosurgical product line includes products and product candidates that are used for the control of bleeding, or hemostasis, and other surgical applications. We compete in the active biosurgical hemostats market, which we believe is the fastest growing segment of the surgical sealant market. We are currently partnered with Ethicon Inc., a Johnson & Johnson Company, in the development of unique biosurgical devices which will meet critical unmet medical needs. Our passive immunotherapy product line includes antibody-rich products and product candidates for the treatment of immune deficiencies and infectious diseases and for potential biodefense applications. We supply vaccinia immunoglobulin, or VIG, to several governments as a means to treat smallpox vaccine-related complications in the event of a smallpox terrorist attack. We currently market in Israel intravenous immunoglobulin, or IVIG, an antibody-based product used to treat primary immune deficiencies, as well as enriched hepatitis B immune globulin (HBIG), and we are broadening our passive immunotherapy platform by improving our current products and developing new product candidates.

## BioCorporate Profiles - upgrade to a full profile

BioPortfolio's BioCorporate full profiles offers your organization the opportunity to increase internet traffic to your corporate web site and enhance awareness of your business, technology, products and services. BioCorporate profiles are dynamic and are updated weekly with new information sourced from core information resources: publications, clinical trials, patents and global news.

Why you should upgrade your BioPortfolio BioCorporate profile:

- the ability to amend and add information on products and services to your profile using a membership username and password
- the option to add a corporate logo
- the creation of high value URL links back to your organization's website which will improve search engine ranking - resulting in increased site traffic
- the option have your press releases published on BioPortfolio and distributed via our BioNewsCast service
- an enhanced BioCorporate profile will also improve your exposure on BioPortfolio's related service InDepth and GeneDB

The annual cost is \$995.00 for established organizations and \$495.00 for organizations less than 12 months old.
