GeneScan Europe AG is a globally operating network of innovative and fast-growing biotechnology companies. The individual subsidiaries' synergetic areas of activity form the ideal basis for enhancing our products and services in the interests of our customers. The range of products for applied molecular biology that results from this pooled expertise will safeguard our success on the market today and in the future.

Based on its forward-looking biochip technology (BioChipnology®), GeneScan Europe AG offers complete solutions for molecular biological analyses in the fields of agricultural and food industry (Business Unit AgroFood), medical diagnostics (BU Diagnostics), science and research (BU Science).

The key areas of GeneScan Europe AG's activities include the development, production and sale of customised as well as standardised microarrays. Biochip-based identification systems for organisms and genetic characteristics are already being used and marketed in the AgroFood sector. The company's many years of experience in the field of food analysis ensures maximum transparency in terms of the identity and quality of foodstuffs and nutritional raw materials. In medical diagnostics, GeneScan biochips are being developed to improve the diagnosis and therapy of disease. Custom-tailored, special chips or standardised application chips that are produced in large series for gene expression studies help customers from the science sector to accelerate the progress of their research projects that are based on ultra-efficient genetic analyses.

The synthesis of biomolecules is also a key area of business for GeneScan Europe AG, which has been established for almost 10 years now and has gained a significant market share in Southern Europe. GeneScan Europe AG's core goal is to satisfy customers' individual wishes. GeneScan does this by providing customers with molecular biological tools such as oligonucleotides and peptides, biochips and the equipment they need to carry out tests and analyses. Comprehensive, expert advice forms just as much part of GeneScan Europe AG's portfolio as the extensive support we provide for the use of our products in the fields of analysis, diagnostics and research.

BioCorporate Profiles - upgrade to a full profile

BioPortfolio's BioCorporate full profiles offers your organization the opportunity to increase internet traffic to your corporate web site and enhance awareness of your business, technology, products and services. BioCorporate profiles are dynamic and are updated weekly with new information sourced from core information resources: publications, clinical trials, patents and global news.

Why you should upgrade your BioPortfolio BioCorporate profile:

- the ability to amend and add information on products and services to your profile using a membership username and password
- the option to add a corporate logo
- the creation of high value URL links back to your organization's website which will improve search engine ranking - resulting in increased site traffic
- the option have your press releases published on BioPortfolio and distributed via our BioNewsCast service
- an enhanced BioCorporate profile will also improve your exposure on BioPortfolio's related service InDepth and GeneDB

The annual cost is \$995.00 for established organizations and \$495.00 for organizations less than 12 months old.
