(<http://www.bioportfolio.com/indepth/Adenomyoma.html>) - Regularly Updated.

Adenomyoma is a form of adenomyosis that forms a mass or growth around the tissue of the inner uterus. Usually occurs in women over 30 who have carried a pregnancy to term. Conversely, it rarely occurs in women who have not carried to term. Most cases of adenomyosis are non-symptomatic. Category: Gynecology

Adenosine Adenosine is a nucleoside composed of adenine attached to a ribose moiety via a β -N₉-glycosidic bond. Adenosine plays an important role in biochemical processes, such as energy transfer - as adenosine triphosphate and adenosine diphosphate - as well as in signal transduction as cyclic adenosine monophosphate, cAMP. It is also an inhibitory neurotransmitter, believed to play a role in promoting sleep and suppressing arousal, with levels increasing with each hour an organism is awake.
