(<http://www.bioportfolio.com/indepth/Bleeding.html>) - Regularly Updated.

Bleeding, technically known as hemorrhage or haemorrhage, is the loss of blood from the circulatory system. Bleeding can occur internally, where blood leaks from blood vessels inside the body or externally, either through a natural opening such as the vagina, mouth or rectum, or through a break in the skin. The complete loss of blood is referred to as exsanguination, and desanguination is a massive blood loss. Loss of 10-15% of total blood volume can be endured without clinical sequelae in a healthy person, and blood donation typically takes 8-10% of the donor's blood volume. ([From the Wikipedia article Bleeding](#).)
