(<http://www.bioportfolio.com/indepth/Narcolepsy.html>)

Narcolepsy is a neurological condition most characterized by Excessive Daytime Sleepiness . A narcoleptic will most likely experience disturbed nocturnal sleep, which is often confused with insomnia, and disorder of REM or rapid eye movement sleep. It is one of the dyssomnias. A narcoleptic may also sleep at any random time. The term narcolepsy derives from the French word narcolepsie created in 1880 by the French physician Jean-Baptiste-Édouard GâfÂ©lineau by combining the Greek narke numbness, stupor and lepsia attack, seizure.
