

Safety

[View the current Safety InDepth page on BioPortfolio.com](http://www.bioportfolio.com/indepth/Safety.html) (<http://www.bioportfolio.com/indepth/Safety.html>) s, such as this one, can improve safety awareness. Safety is the state of being "safe" , the condition of being protected against physical, social, spiritual, financial, political, emotional, occupational, psychological, educational or other types or consequences of failure, damage, error, accidents, harm or any other event which could be considered non-desirable. This can take the form of being protected from the event or from exposure to something that causes health or economical losses. It can include protection of people or of possessions. There also are two slightly different meanings of safety, for example, home safety may indicate a building's ability to protect against external harm events , and the second that its internal installations are safe for its habitants. Safety can be limited in relation to some guarantee or a standard of insurance to the quality and unharmed function of an object or organization. It is used in order to ensure that the object or organization will do only what it is meant to do. It's important to realize that safety is relative. Eliminating all risk, if even possible, would be extremely difficult and very expensive. A safe situation is one where risks of injury or property damage are low and manageable.
