

Syringoma

[View the current Syringoma InDepth page on BioPortfolio.com](#) (PDF)

(<http://www.bioportfolio.com/indepth/Syringoma.html>) - Regularly Updated.

Syringomas are harmless sweat duct tumors, typically found clustered on eyelids, although they may also be found in the armpits, umbilicus, or vulva. They are skin-colored or yellowish firm rounded bumps, 1-3 mm in diameter, and are often confused with xanthelasma. They may be removed with erbium or carbon dioxide lasers. ([From the Wikipedia article Syringoma](#).)
